

Garage Unique Front Lip 23+ Civic Type-R

Written By: Hybrid Racing

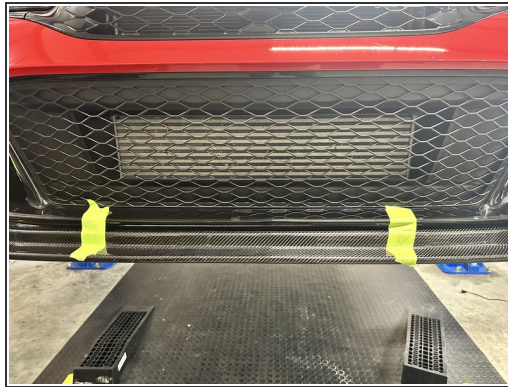

Step 1 — Access lower bumper

- Make sure you have clear access to the lower bumper. You will need to drill into the bumper so make sure you have enough room for your tools.
- Clean the lower bumper surface.

Step 2 — Align lip

- Test fit the front lip using tape and a helping hand. Make sure the lip is even on both sides and lines up correctly to the lower portion of the bumper.
- There shouldn't be any large gaps between the top of the lip and lower bumper.

Step 3 — Attach lip

- Use the supplied hardware and screw the lip to the bumper. This lip requires you to screw directly into the plastic bumper, it does not use the OEM locations.
- OEM Tabs would not offer enough support for the front lip so screwing it directly to the bumper is the best and strongest option.
- The screw holes will not be visible if the lip is removed.
- ❗ There are pre-drilled holes in the lip. Use those holes as the mounting locations.

Step 4 — Apply badge

- Once mounted, clean the lip and wipe the center section with alcohol.
- You can now attach the supplied name tag if you wish.
